OA Risk Category: The DI is less than or equal to 0.30. This patient is at minimal risk for hip OA.  
Distraction Index Chart:

**BREED STATISTICS:** This interpretation is based on a cross-section of 38071 canine patients of the LABRADOR RETRIEVER breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.26 - 0.74) for the breed. The breed average DI is 0.45 (solid square). The patient DI is the solid circle (0.24).

**SUMMARY:** The degree of laxity (DI = 0.24) ranks the hip within the tightest 5% of DIs for the breed. This amount of hip laxity places the hip at a minimal risk to develop hip OA. No radiographic evidence of OA for either hip.
